Education

BSc (Hons) in Computing (Major in Software Development)

Universiti Teknologi Brunei

Graduating Upper Second Class Honours in August 2026

HND in Web Development

Politeknik Brunei

Jun 2022

Employment History

1 SHENA

IT Intern

Jan 2026 — Jun 2026

- **Designed, developed and deployed** a Microsoft Power Platform Inventory Management System that replaced manual inventory request processes with automated workflows, approvals, and inventory tracking.
- **Built and optimized** Power Apps, Power Automate, and SharePoint solutions, including workflow automation, concurrency control, validation, tenant migration, testing, documentation, and ongoing system maintenance.
- **Delivered technical support** for enterprise IT operations, including hardware/software troubleshooting, Microsoft 365 administration and audiovisual systems

2 Jabatan Pembagunan Masyarakat (JAPEM)

Social Worker

Nov 2022 — Jun 2023

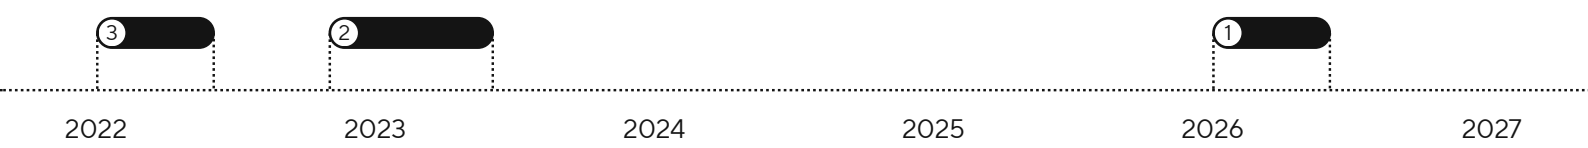

- **Managed client cases** and conducted needs assessments to identify appropriate social assistance.
- **Connected clients** with community resources including financial aid, housing assistance, and healthcare services.
- **Maintained** accurate case documentation and records in compliance with organizational standards.

3 Qafa Haus

Content Producer

Jan 2022 — Jun 2022

- **Produced digital content** including promotional videos and social media materials.
- **Assisted in video production** from planning and filming through post-production editing.
- **Supported** live event coverage and managed real-time social media updates.

Projects

Inventory Management System (Capstone Project) — SHENA

Microsoft Power Platform | Power Apps | Power Automate | SharePoint

- Designed and developed an enterprise inventory management system to replace manual inventory request processes, including a Power Apps request interface, SharePoint-based inventory database, and automated approval workflows.
- Implemented a multi-stage approval workflow using Power Automate to streamline inventory requests between requestors, department directors, HR administrators, and management.
- Developed automated low-stock and expiry notification systems to monitor inventory levels and expiration dates, providing timely alerts to administrators for stock replenishment and item management.
- Implemented validation rules and concurrency handling mechanisms to prevent incorrect requests, duplicate deductions, and inventory conflicts during simultaneous transactions.
- Migrated the completed solution from the UTB Microsoft 365 environment to SHENA's Microsoft 365 environment, including SharePoint data migration, Power Apps configuration, and Power Automate workflow adjustments.
- Created system documentation and user manuals, and conducted final presentations and handover to SHENA management and administrators.

Illegal U-Turn Detection System
Computer Vision | OCR | Image Processing

- Developed a prototype traffic monitoring system in **Python** to detect vehicles performing illegal U-turns.
- Integrated **Tesseract OCR** and **OpenCV** to automatically extract vehicle license plate numbers from captured images for identification.
- Processed and analyzed traffic footage to evaluate the feasibility of automated traffic violation detection.
